Collaboration between NC Department of Public Instruction and AIG Teachers across the state

TO ENGAGE, ACTIVATE, AND GROW OUR STUDENTS

Movement

ENGLISH LANGUAGE ARTS

A variety of words in a language can be used to describe similar actions. Words have nuances that describe shades of meaning and help the reader or listener to better understand the action or description.

Read these words and act them out:

jump | hop | skip | leap | spring | bound

- How are these actions similar? Different?
- Which word best describes a frog, a kangaroo, a gymnast, a basketball player?

Now, brainstorm a list of words that have similar meanings to each of these actions:

- dance
- run
- laugh

Choose one word from each list to use in a sentence and act out.

SOCIAL STUDIES

Migration can be defined as movement from one place to another. Physical features, such as mountains, rivers, and roads affect the way people move.

Imagine you are moving to a new location. Consider how each of the following might impact movement: a mountain, a river, a lake, a road.

- How might each feature slow down your travel?
- How might each feature assist you in your travel?
- What will you need that will allow you to use each feature to your advantage?

Draw a map that includes a mountain, river, lake, and road. Mark a starting and ending point on the map. Describe the route you will travel, using cardinal directions (north, south, east, and west).

SCIENCE

A force (push or pull) can be applied to an object without touching the object. With a friend or family member, make a rocket move without touching it by following these steps:

- 1. Create a rocket using an empty toilet paper tube.
- 2. Cut two pieces of 5-foot yarn and put them through the rocket tube.
- 3. Each person holds one end of each piece of yarn so the yarn stretches between them. Start with hands together, then one person spreads their hands so that the two pieces of yarn separate.
- 4. Use various speeds (open your arms slowly, then quickly) and heights (raise and lower your arms).

What makes the rocket move? Describe the motions of the rocket. How did varying the speed and height impact the movement?

Sometimes our stressful energy can be hard to manage. Using our imaginations to focus on calming movements can help our bodies feel more grounded.

Use this short video to learn an exercise that can help calm stressful energy:

https://www.youtube.com/watch?v=bRklLioT_NA

- How did you feel before practicing the activity in the video?
- How did you feel after the activity?
- Make a list of similar activities that might help you calm your body when you feel stressed.

Discuss what you have learned with a friend or family member and determine when you might use this technique. Create a poster or other visual to help remind you of this technique when you feel stressed.

LOGIC PUZZLE

Six drinking glasses stand in a row; the first three are full of juice and the next three are empty.

By moving only one glass, how can you arrange them so that the empty and full glasses are alternating?

FIELD STUDIES

Gravity is a force that affects movement on Earth and in space. Watch this video to learn more about gravity: https://www.pbs.org/video/gravity-m3swlv/

Experience gravity on Earth. Collect items from around your house like pencils, balls, or books.

Carefully release each one from above your head. What happens? This is gravity at work!

- What would life be like if gravity did not exist? How could we adapt to objects and ourselves floating around?
- Would you like to experience weightlessness in space? Why or why not?

Record your information and thoughts in your science notebook.

Objects move when force is applied to them. Explore motion using a toy car and an inclined plane. Create a ramp (inclined plane) using a board and a stack of books or a long piece of cardboard and a box. Hold a toy car at the top of the ramp and release it.

Record your data and conclusions in a science notebook:

- What did you notice?
- Describe the car's movement using words like zig-zag, fast, slow, and straight.
- Describe where the car stops using position words like below, beside, and between.
- How is the movement of the car affected if you push it before releasing it?

Extension: Use different materials (bubble wrap, foil, sticks, etc.) on the ramp you built. How did adding these materials affect the movement of the car?

MATH

Engineers consider how movement will impact things they build. For example, will a design withstand strong winds or a crash? Learn about geometry and design from the slide show at this link: <u>https://bit.ly/30qcC8K</u>

Using toothpicks and gumdrops, create a structure that can hold a plastic egg. Use triangles, squares, rectangles, or hexagons in the design. The structure must include an opening large enough for the egg to enter and exit and be able to contain the egg when it is dropped.

- Did your design protect the egg when it was in motion?
- Which geometric shape did you use in your design?
- Revise your design using fewer supplies.
- Make a new design with different shapes.

Collaboration between NC Department of Public Instruction and AIG Teachers across the state

TO ENGAGE, ACTIVATE, AND GROW OUR STUDENTS

Movement

ENGLISH LANGUAGE ARTS

Movement is a word with multiple meanings. One definition of movement is a change or development. The actions of characters in a story help to create changes and developments that move the story along. It is their actions that help contribute to the sequence of events in a story.

Using a story you've already read or one you're currently reading, create a magazine cover for one of the novel's main characters. Include the following that contribute to important events in the story:

- details about the character's external features, or physical appearance
- details about the character's internal characteristics, or personality traits
- titles for "articles" on the main character's thoughts and actions
- titles for "articles" on other characters' reactions to the main character

SOCIAL STUDIES

One definition of movement is the act of changing physical location. Another definition is the moving parts of a system. Watch this video about Malcolm McLean, a small-town truck driver from North Carolina, and learn how he impacted the modern global economy: <u>https://bit.ly/3hgXG3T</u>

Using a multi-flow thinking map, analyze the causes of the change in movement of goods and its effect on people, ideas and communities. Use this link for reference: <u>https://www.thinkingmaps.com/why-</u> thinking-maps-2/

Research the movement of goods, people and ideas that have impacted your community. To present your findings, create another multi-flow map that shows the cause and effect of movement of goods, people and ideas in your community.

SCIENCE

A trebuchet is a type of catapult that uses a long arm to throw an object. The trebuchet uses simple machines and energy to create movement. Watch the video below to learn more. As you watch, notice how the machines work together and how the mass of the object affects the distance it travels.

https://youtu.be/W5RFoowvGkw

Follow these directions to build your own mini trebuchet: <u>https://bit.ly/3eFdtrh</u>

Experiment with objects of different weights to see how your objects move differently through the air. Record your results. Change another aspect of your trebuchet, perhaps the length of the sling, and record the observations. Document the changes you made to the design of the trebuchet in your science notebook.

There are many types of mindful movement that have been around for ages. Qigong is a Chinese health and wellness practice that focuses on a combination of movement, meditation and breathing.

Watch this video and learn about the practice of Qigong:

https://www.youtube.com/watch?v=eAQzFqdc7Hs.

Try these movement practices for a week and reflect upon any differences you see in the connection between your mind and body.

Teach these movements to someone you know. Explore other movements that you could add to create your own mindful movement practice.

LOGIC PUZZLE

Hungarian engineer, Endre Pap, is credited with creating an interlocking ring puzzle called

"Hungarian Rings." Similar to a Rubik's cube, rings are moved to align colorful balls.

Try your skill at Hungarian Rings on this website: <u>https://ruwix.com/online-puzzle-simulators/</u> hungarian-rings/

Another moving puzzle you can try is the Color Wheel on the website below: <u>https://www.puzzleatomic.</u> <u>com/GAMES/colorwheels/colorwheels.html</u>

FIELD STUDIES

One definition of a movement is a group of people working together to advance their shared political, social or artistic ideas. Movements are powerful ways to bring about change, but how do you start a movement that truly makes an impact?

Watch this TEDTalk on how to create a movement: https://bit.ly/2E2ttHm

After watching the TEDTalk, do you agree with the speaker's point of view on what the most important factor is in starting a movement? What other factors are important to consider, such as the idea of the movement, timing, and risks involved? How are these factors considered in getting the movement started?

Create a co-TEDTalk to build upon the one you viewed and the factors necessary to create a movement. What is an idea for change you would like to turn into a movement?

Use the information you learned to get started!!

RESEARCH EXPLORATIONS

Migration is defined as the seasonal movement of animals from one region to another. At the end of every fall, millions of monarch butterflies embark on a journey that takes them over 2,000 miles.

Research more about where monarchs live, where they travel, and why. Use this link to start your research: https://kids.nationalgeographic.com/animals/ invertebrates/insects/monarch-butterfly/. Create a map that shows the path of their migration from where it starts to where it ends.

Write and perform two episodes of a news report (similar to a weather report, but instead a "migration report") Include a colorful map that shows the monarch's migration two times each year.

MATH

The "value" of a digit depends on in which "place" it is located. Move the digit to a different place and the value changes. Play "Some Sum." The object is to find the largest sum that can be made by adding two 2-digit numbers. Make a stack of 10 cards: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9.

To play:

- 1. Draw a card. Decide if it goes in the ones or tens place.
- 2. Draw another card. Place it in the ones or tens place. (Cards cannot be moved once placed.)
- 3. Continue until you have drawn 4 cards and have two 2-digit numbers to add.

Play a few rounds. Consider your strategy: Are there certain numbers you place easily? What are they? How would your strategy differ if you were aiming for the lowest sum OR subtracting?

Collaboration between NC Department of Public Instruction and AIG Teachers across the state

TO ENGAGE, ACTIVATE, AND GROW OUR STUDENTS

Movement

ENGLISH LANGUAGE ARTS

What we say and how we say it is powerful and has the ability to move people to make them think, feel and/or act, potentially creating a movement for change. Think about a topic that is important to you, possibly something you want people to start or stop doing.

Create a report or presentation on the topic, sequencing your ideas logically in a way that flows, making sure you have appropriate facts and relevant, descriptive details to support your main ideas.

Practice presenting your report in a way that moves your intended audience by considering your voice level, tone, body language and eye contact to get your intended message across and hopefully, move them to learn, think and act.

SOCIAL STUDIES

In Understanding the Changing Planet: Strategic Directions for the Geographical Sciences, the author states, "Without the movement of goods, people, and ideas, cities falter, economies wane and societies wither."

- What do you think this statement means?
- How has the movement of goods, ideas and various cultural groups influenced the development of regions in the U.S.?

Choose a region of the U.S. and research the impact of goods, ideas, and cultural groups on the region. Create a map of the region and include symbols for the people, goods and ideas/innovations that are part of that region.

Reflect upon how the region might be different without the movement of one of these key elements. What other people and/or areas might be impacted?

SCIENCE

Moving your body is one way to keep it healthy. Exercising can help more than just your muscles.

The Walking Classroom is used by thousands of students nationwide. Educational material is narrated like a podcast so that students and teachers can learn while they move. Read about The Walking Classroom here: https://www.thewalkingclassroom.org/

Explore more on their webpage. Listen to a sample podcast, read about student experiences, and see a few videos of students in action.

- How does movement affect learning?
- Which classes do you think this type of learning would work best?
- Why is exercise not only important for the muscles, but also your brain?

Write a letter to your teachers encouraging them to try the walking classroom. Explain the benefits and how this could be incorporated to fit your schedule.

MINDFULNESS

Mindful movement can help you align your mind and body, resetting your nervous system and clearing and calming your mind so that you are able to focus.

Read about four practices designed for children in your age group at the following website: <u>https://</u> <u>www.healthykidslearnmore.com/Healthy-Kids-</u> <u>Learn-More/Educator-Resources/Take-5ive/Mindful-</u> <u>Movement-K4-8</u>

Each movement practice has a different focus or purpose. Read each description and choose the practice that best fits your needs or interests. Try these movement practices for a week and reflect on any differences you see in the connection between your mind and body.

What movements were the most helpful? What movements could you add or combine to create your own mindful movement practice?

LOGIC PUZZLE

In 1974, a Hungarian architect named Erno Rubik, created a hands on cube with moveable pieces. He did this to explain 3-dimensional geometry and called it the "Magic Cube." Though he created it, it took him over a month to solve.

Try your skill at Rubik's Cube at this website: https://rubiks-cu.be/

Another moving puzzle you can try is the Color Wheel on the website below: <u>https://www.puzzleatomic.</u> <u>com/GAMES/colorwheels/colorwheels.html</u>

FIELD STUDIES

Let's take a tour through the PBS "American Experience" collection which documents the Civil Rights Movement through articles, digital shorts, and original features of important events. Visit these websites to learn more about this time period:

- https://mlk50.civilrightsmuseum.org/dr-kingslegacy
- <u>https://www.pbs.org/wgbh/</u> americanexperience/collections/civil-rights/

Describe some of the major events that Dr. Martin Luther King Jr. attended. What was the main purpose for each event and how did he support that purpose?

What is the difference between human and civil rights? Provide examples of each. How did the actions and beliefs of individual activists, such as Rosa Parks and John Lewis, drive the momentum of the Civil Rights Movement as a whole? Create a reflective journal with your thoughts and feelings on the events that occurred during the Civil Rights Movement.

RESEARCH EXPLORATIONS

Robotics or animatronics? It depends on the purpose. Robots are automatic, programmed machines created to carry out specific tasks. Animatronics are a type of robot that combines puppetry and mechatronics (machines and electricity). Animatronics are typically used for entertainment. The first debuted at the 1939 World's Fair. Disney's Mary Poppins featured animatronic birds in 1964, which were the first animatronics to appear in a movie.

Additional research resources:

- <u>http://www.theatrecrafts.com/pages/home/</u> topics/animatronics/
- https://bit.ly/2E25IVk

Create a working hand, the first step in animatronics "puppetry" without the electricity, using the instructions on the following website: <u>https://www.</u> greenkidcrafts.com/diy-robot-hand-steam-activity/

MATH

In any given number, moving the decimal point to the right increases the value of the digits, and moving the decimal place to the left decreases the value of the digits.

Example: 12.45 < 124.5 and 12.45 > 1.245

Create a "Rule Book" for a confused decimal point. In the book, provide guidance to the confused decimal as to where it should move when adding, subtracting, multiplying, and dividing. Include numerical examples, as well as visuals to aid the decimal point.

- Why does the decimal move at all?
- How will the decimal know when it has been moved to the correct place?
- What changes occur in decimal movement when performing the different operations?

 $www.dpi.nc.gov/students\mbox{-}families/enhanced\mbox{-}opportunities/advanced\mbox{-}learning-and\mbox{-}gifted\mbox{-}education$

Collaboration between NC Department of Public Instruction and AIG Teachers across the state

TO ENGAGE, ACTIVATE, AND GROW OUR STUDENTS

Movement

ENGLISH LANGUAGE ARTS

A misplaced modifier (i.e., a word, phrase, or clause that gives additional meaning) can make a sentence confusing. Here is an example of a modifier that has been misplaced: I served cake to the children on paper plates. "On paper plates" was added to the sentence to help us know how the cake was served, but as written, it reads that the children were on the paper plates.

Try moving words in these sentences to make the meaning clearer: 1. He nearly stood in line at the store for four hours. 2. She saw a cat and pigeon on the way to the store. 3. Grandma bought a dog for my sister named Sparky. 4. He threw the ball to the man made of orange rubber.

Now write a sentence with a modifier purposely misplaced to make the sentence humorous. Illustrate it. Share with someone and have them correct it.

SOCIAL STUDIES

The Silk Road was a network of trade routes that connected Asia to Europe for over seventeen centuries and increased cultural, political, and religious interactions. The Silk Road's most famous traveler was Marco Polo. To learn more read the information on the websites below:

- Video overview: <u>https://bit.ly/395XAJr</u>
- Silk Road defined: <u>https://bit.ly/2WuVvBH</u>
- Biography of Marco Polo: <u>https://bit.ly/20zWex1</u>
- Heritage of the Silk Roads: <u>https://bit.ly/30pq4tJ</u>

After synthesizing the information, determine what effects this movement had on societies and regions over time. Consider patterns of change and specific effects on particular cultures.

Have other movements (e.g., colonization efforts, Triangular Trade, Trail of Tears) of people, ideas, or goods had any of the same effects? Why or why not? Develop a presentation to share with your classmates.

SCIENCE

When someone mentions a wave, what do you visualize? An ocean wave? A microwave? A wave of light? A sound wave? What do all these waves have in common? Read the information on the website below for an explanation and demonstration of the difference in longitudinal, transverse, and surface waves: https://scienceprimer.com/types-of-waves

Try to find examples of these types of waves in nature or create examples of each. Consider items that you can use to do this (e.g., rope, slinky, shoestring, water, etc.).

Record your observations in a science notebook. Answer the question: what makes a wave a wave? Draw examples of the different kinds of waves.

After your activity, follow this link to learn more about waves: <u>https://www.physicsclassroom.com/class/</u> <u>waves/Lesson-1/What-is-a-Wave</u>. Take the quiz at the end to check your understanding.

MINDFULNESS

Place your pencil or other drawing utensil on a blank sheet of paper. Sit quietly and notice your breathing.

Visualize your breath as you inhale through your nose, going to your lungs and expanding your chest. Now visualize your breath as you exhale, going out the same way. How does it move? Does it move in a straight line or does it curve? Draw the movement on your paper. Play with different lines as you breathe. Are your lines dark and wide or light and thin?

Change your breathing. Breathe faster or slower. How does this change what your drawing looks like? Draw lines on your paper and match your breathing to the lines. Try using different colors. What do the colors mean?

Keep your art in a place as a reminder of how being more mindful of your breathing can be beneficial to your overall health.

LOGIC PUZZLE

Cori, the camel, is 1000 miles from the market. She has 3000 bananas. She can carry a maximum of 1000 bananas and eats one banana for each mile traveled.

What is the greatest number of bananas Cori can get to the market?

Create a diagram to show your thinking.

FIELD STUDIES

Imagine that you can travel anywhere in the world- It might be one particular place or a series of locations. Use the Internet and/or other resources available from the library to plan the trip.

Create a spreadsheet to calculate all costs and to keep up with links to important destinations. Consider the following: the cost of transportation methods (e.g., plane tickets, luggage fees, rental cars, fuel costs, subway fares, etc.) if places require a fee, links to places you plan to visit or stay, the cost of food and lodging, and how many people with travel with you.

What is the total cost of your trip? What is the total cost per person?

Share your information with an adult to determine if any expenses were overlooked.

RESEARCH EXPLORATIONS

The International Space Station (ISS) orbits 250 miles above the Earth with an orbital inclination of 51 degrees, which means the path varies. Research the orbit of the ISS. How often does it travel around the Earth? How does Earth's gravity affect the path? Can you predict its path?

- Follow the directions at the ISS map link to see the shape of the orbit: <u>https://bit.ly/3jlb6xr</u>
- For live tracking of the ISS use this site: <u>https://spotthestation.nasa.gov/tracking_map.cfm</u>

Use the information from the websites to track the ISS. Plan a time you can see the ISS. Will you be able to spot it from your home? Where is the best place to spot it that is near you?

Create a public service announcement of 140 words or fewer making your friends, family, and neighbors aware of how to spot the ISS and the importance of the ISS.

MATH

A pilgrim enters the town of Duonai and would like to visit the temple. Unfortunately, the pilgrim is penniless and the town charges a tax depending on the path taken. Moving in different directions can cause the tax to go up or down.

Can you get the pilgrim to the temple without paying any taxes? Watch this video for further details, but be sure to pause it at 1:51 to figure out your problem: <u>https://www.youtube.com/watch?v=6sBB-</u> gRhfjE&disable_polymer=true

- Were you able to solve the problem mathematically?
- Give the problem to a friend or family member. Can they solve the problem?

Explain your solution to your friend or family member.

Collaboration between NC Department of Public Instruction and AIG Teachers across the state

TO ENGAGE, ACTIVATE, AND GROW OUR STUDENTS

Movement

ENGLISH LANGUAGE ARTS

The Harlem Renaissance was a literary movement during the 1920s established from the NewYork City neighborhood of Harlem. During this period, many African Americans who had relocated from the American South during the Great Migration began to express themselves as poets, novelists, artists, and thinkers.

While Langston Hughes and Zora Neal Hurston are presumably the authors most associated with the movement, there were many others. Explore the works of at least one author and one artist of the Harlem Renaissance.

Keep in mind that the arts include visual, musical and performing arts. In your journal, make three columns: title, important information, how does this add to previous knowledge? After each text or piece of art, stop and record. What did you learn that was new and important about the Harlem Renaissance from this resource?

SOCIAL STUDIES

In 1830, the United States passed the Indian Removal Act, which paved the way for President Andrew Jackson to force five nations of Native Americans, including the Cherokee, to move west of the Mississippi River. Along the way, a quarter of the Native Americans died.

The Cherokee who remained in Oklahoma are recognized as the Cherokee Nation, but those who went into hiding in the NC mountains eventually became recognized as the Eastern Band of the Cherokee. Explore these links to learn more about the Trail of Tears:

- https://bit.ly/3fFNWja
- http://www.nctrailoftears.org/about-the-trail/
- https://bit.ly/2WykN1T

After reviewing the links, create a visual that explains how the forced migration known as the Trail of Tears impacted the development of US history and the impact on the Cherokee who remained and those who were forced to move.

SCIENCE

What is the difference between an epidemic and a pandemic (hint: the prefix pan means all)? How do they relate to an outbreak? Learn about the difference as well as disease terminology on the following website: <u>https://bit.ly/30um3Eb</u>

Create a chart that lists the terms epidemic, pandemic, endemic, and outbreak. Research to find at least five examples of each.

- Make sure to include the date, the location, and the number of individuals infected.
- How does the concept of movement relate to each one?
- Below the chart, explain the difference between an epidemic and a pandemic in your own words.

Mindfulness is the act of being in the moment and aware of your surroundings. Take a mindful walk at a slow pace and stay quiet.

Focus on what you see, hear, feel, and smell. Consider the following questions:

- Is the sun warming your skin?
- Can you hear children playing or birds chirping?
- Can you smell freshly cut grass?
- Can you hear your own breathing or your feet making contact with the ground?

When you return from your walk, journal or draw a picture to document your walk. Will you take another mindful walk? Consider planning a mindful walk with a friend or family member.

LOGIC PUZZLE

Shift your brain into gear with this challenging engineering puzzle! Put your problem-solving skills to the test as you try to determine the movement of multiple cogs and gears.

Try to determine what happens as the monkey turns the gears or click on the following link for an online version of the gear puzzle: <u>http://www.</u> <u>engineering.com/</u> <u>gamespuzzles/</u> <u>connectit.aspx.</u>

If the monkey rotates the first gear anti clockwise, the hand in last gear move towards 1 or 2?

FIELD STUDIES

The fight for American civil rights spanned decades, cities, and states. Explore the Civil Rights Trail website and learn more about the Civil Rights Movement: https://civilrightstrail.com

On this website, explore destinations involved in the Civil Rights Movement and gain insight. Design your own Civil Rights Trail based on at least five sites that interest you.

Create a presentation about each site. Be sure to include how leadership and citizen action influenced the outcomes at each site.

RESEARCH EXPLORATIONS

Kinesiology is the scientific study of human or nonhuman body movement. In addition to the neurological system, muscles, bones, tendons, and ligaments are all required to create movement.

Research the movements in the human arm and hand. Design a working model. Ideas can be found at this site: <u>https://www.scienceprojects.org/design-and-</u> make-a-model-arm/

- Take pictures and summarize what happened as you created the model arm.
- What did you use for bones, muscles, ligaments, and tendons?
- What difficulties did you encounter?
- What did you do to solve the problem?
- What would you do differently?

MATH

Elton Brand was a number one draft pick in the NBA after playing for Duke University. Watch this video to see how he credits math for the rapid improvement of his basketball skills: <u>https://to.pbs.org/3hcc9Os</u>

Can you calculate the maximum height for Brand's perfect free throw? His average release velocity is 24 feet per second while the average release height is seven feet off the ground.

Create a graph that models the movement of Elton's perfect free throw using the Desmos Graphing Calculator. What happens if both height and initial velocity of the free throw is adjusted?

Watch the following video to learn more about how math is used to enhance the game of basketball: https://bit.ly/2Cply5l

Collaboration between NC Department of Public Instruction and AIG Teachers across the state

TO ENGAGE, ACTIVATE, AND GROW OUR STUDENTS

GRADES **10-12**

Movement

ENGLISH LANGUAGE ARTS

The annual migration of North America's monarch butterfly is a unique and amazing phenomenon.

The monarch is the only butterfly known to make a two-way migration as birds do.

The "Monarch Highway" that runs north-south through America earned its name because of the habitat it provides. What/who are the key players on the highway?

Why do these butterflies migrate to South America? View the information on this link to answer these questions and learn more about the Monarch's journey: https://www.fs.fed.us/wildflowers/pollinators/ Monarch_Butterfly/migration/index.shtml

Write a poem about the roles of the pollinators on the Monarch Highway. Include imagery and other examples of figurative language.

SOCIAL STUDIES

The United States had many reasons for going to war in 1812: Britain's interference with its trade and impressment of its seamen; Americans' desire to move into Indian, British, and Spanish territories; aspirations to conquer Canada and end British influence in North America; and upholding the nation's sovereignty and vindicating its honor.

Visit the "1812: A Nation Emerges" online exhibit here: http://npg.si.edu/exhibit/1812/

Analyze information about the War of 1812 that identifies which people, events, terms, and concepts are most important to understanding the era.

Create a multimedia presentation on the War of 1812. Include visual images, a list of key terms and people, and links to where your peers can find more information. Be sure your presentation reflects your complete understanding of the era.

SCIENCE

The carbon cycle is vital to life here on Earth. Nature keeps our carbon levels balanced so our planet remains able to sustain life. By burning fossil fuels, humans have added more carbon to the atmosphere leading to climate change and global warming.

This video uses an animated machine to show how carbon moves around the Earth's surface – from the atmosphere to rocks: <u>https://www.youtube.com/</u> watch?v=IWEvBLIUa2E&app=desktop

Write a skit or journal entry from the point of view of a carbon atom. Describe your journey over thousands of years on planet Earth. Include a monologue about why it is important for humans to respect and take care of you.

MINDFULNESS

Participating in physical activity is an important health maintenance strategy for people of all ages. According to the Mayo Clinic, "Exercise delivers oxygen and nutrients to your tissues and helps your cardiovascular system work more efficiently." Physical activity can be so much more than walking or running. The information on this link provides many ways to move and become healthier:

https://www.healthlinkbc.ca/health-topics/aa165656

Create a Personal Exercise Plan (PEP). Include different types of exercise that will keep you healthy for a minimum of 30 minutes each day for 5 days a week.

After one month, analyze the benefits of your PEP. Create a list of the differences you feel, mentally and physically.

LOGIC PUZZLE

Plumbing can be traced back to 3,000 B.C. when the Indus River Valley civilization used earthen plumbing pipes to provide moving water. How much water is moved in our pipes today?

Use the following clues to solve the puzzle:

- The cold faucet in my bath lets the water in at the rate of 15 liters per minute.
- The hot faucet fills the bath at the rate of 10 liters per minute.
- The plug hole lets the water out of the bath at the rate of 12 liters per minute.
- The bath holds a maximum of 520 liters.
- I turn both faucets on, but I forget to put the plug in.

How many minutes does it take for the bath to overflow?

FIELD STUDIES

The ocean is never still. Even in a quiet marina, you can see the water is slowly moving. What causes the coral to wave or the anemone to sway? Ocean currents.

Travel under the sea to learn more about currents, gravitational pull, and tides on this website: https://oceanservice.noaa.gov/podcast/apr14/mw123currents.html

What questions do you still have about the movement of the ocean? Analyze what would happen to sea life if the ocean was stagnant.

Create an ocean scene that depicts the movements of the ocean.

RESEARCH EXPLORATIONS

"Nothing happens until something moves" - Albert Einstein

From Volcanologists to Solar Physicists, there are careers in air and space that people don't know exist. Whether it is the movement of human invention or the explosion of a supernova light years away, many careers revolve around this concept.

Research careers in aviation and space using this link: <u>https://airandspace.si.edu/learn/highlighted-topics-/</u>careers

Create a visual representation of 10 careers that interest you and are related to air and space. What steps do you need to take now to ensure your future success within this field? What courses should you take in high school? Consider the research opportunities you can engage in now that explore the career in which you are interested.

MATH

Vehicles have kinetic energy (KE); as you increase your vehicle's speed, the KE increases. The greater the KE (KE= $0.5 \times mv2$), the greater the effort required to stop. KE increases exponentially; if you double your vehicle's speed, your vehicle's KE increases by four times, therefore, stopping distance will be multiplied by four.

If you are traveling 60 mph your stopping distance is 180 feet. What is your stopping distance at 65 mph? 75 mph? How does the mass of a vehicle relate to the stopping distance?

Choose 5 vehicles and determine the KE of each when traveling at the same speed. Rank these from most safe to least. Be sure to justify your order.

What would you need to consider if you choose to buy the least safe car? What car would you recommend for an inexperienced driver and why?

Collaboration between NC Department of Public Instruction and AIG Teachers across the state

TO ENGAGE, ACTIVATE, AND GROW OUR STUDENTS

Movement Reference Guide

K-1 Logic Puzzle:

Solution: Pick up the 2nd glass and pour its contents into the 5th class and set it back down in its place empty.

6-7 Logic Puzzle

Solution example:

- 1. Start trip with 1000 bananas
- 2. Travel 200 miles and have 800 left. Leave 600 at 200 mile point, keep 200 for 200 mile trip back to start.
- 3. Pick up another 1000 bananas
- 4. Travel 200 miles and have 800 left. Pick up 200 from stashed and carry 1000 and have 400 more stashed.
- 5. Travel an additional 333 1/3 miles, you're left with 666 2/3, stash 333 1/3 there (533 1/3 mile point), you have 333 1/3 left
- 6. Travel back 333 1/3 miles to 200 mile point and pick up 200 stashed (leaving 200 still at 200 mile point), go back the other 200 miles.
- 7. Pick up another 1000
- 8. Travel to 200 mile point, leaving 800 bananas, pick up remaining 200 stashed
- 9. Pick up 1000 bananas travel 333 1/3 miles to 533 1/3 mile point, you're left with 666 2/3 bananas.
- 10. Pick up all 333 1/3 that were stashed
- 11. You are back at 10
- 12. Make remaining 466 2/3 mile trip, 1000-466 2/3 = 533 1/3 bananas left at the end.
