

**ELD Standards Mapping
ELD Standard 3: Language for Mathematics
Grades K-12**

The English Language Development (ELD) Standards Mapping Documents are designed to show the connections between the ELD Language Expectations for the five ELD Standards and the content standards for English Language Arts, Mathematics, Science and Social Studies, as well as support integration of the ELD Language Expectations and content to support Multilingual Learners' (ML) learning. This specific ELD Standards Mapping Document focuses on ELD *Standard 3: Language for Mathematics*.

The mapping document can be used by all teachers of MLs to explore the connections between language and content for a variety of purposes, such as developing and aligning curriculum, planning instruction, and co-teaching.

Please note that Standard 1 is not included in this Mapping Document. Standard 1 applies across a range of educational settings and is embedded throughout *ELD Standard 3: Language for Mathematics*. This moves beyond the binary view of social language as a precursor to academic language and views students' everyday language as a legitimate component of academic language development and part of the system of choices students make in order to most effectively meet activity purpose and other contextual variables. The emphases in Standard 1 have heightened attention to the notion that language, social-emotional, and cognitive development are interrelated processes that contribute to students' success in school and beyond. As students make their thinking visible, they communicate to learn, to convey personal needs and wants, to affirm their own identities, and to form and maintain relationships (WIDA 2020). Standard 1 can also be interwoven throughout Mathematics instruction.

The charts below appear in order of the ELD SCOS grade-level clusters ([K](#), [1](#), [2-3](#), [4-5](#), [6-8](#), [9-12](#)) in the left column with the connected Mathematics standards in the right columns. Shading is used throughout the document to assist viewers in identifying mapping for each language expectation. This document does not include an exhaustive list of the possible connections. Educators should use their knowledge of the ELD standards and their professional judgment when selecting ELD language expectations and Mathematics standards for integration.
