

# English as a Second Language (ESL)/Title III English Language Development (ELD) Standards Division of Academic Standards

## ELD Standards Mapping ELD Standard 4: Language for Science Grades K-12

The English Language Development (ELD) Standards Mapping Documents are designed to show the connections between the ELD Language Expectations for the five ELD Standards and the content standards for English Language Arts, Mathematics, Science and Social Studies, as well as support integration of the ELD Language Expectations and content to support Multilingual Learners' (ML) learning. This specific ELD Standards Mapping Document focuses on *ELD Standard 4: Language for Science*.

The mapping document can be used by all teachers of MLs to explore the connections between language and content for a variety of purposes, such as developing and aligning curriculum, planning instruction, and co-teaching.

Please note that Standard 1 is not included in this Mapping Document. Standard 1 applies across a range of educational settings and is embedded throughout *ELD Standard 4: Language for Science*. This moves beyond the binary view of social language as a precursor to academic language and views students' everyday language as a legitimate component of academic language development and part of the system of choices students make in order to most effectively meet activity purpose and other contextual variables. The emphases in Standard 1 have heightened attention to the notion that language, social-emotional, and cognitive development are interrelated processes that contribute to students' success in school and beyond. As students make their thinking visible, they communicate to learn, to convey personal needs and wants, to affirm their own identities, and to form and maintain relationships (WIDA 2020). Standard 1 can also be interwoven throughout Science instruction.

The charts below appear in order of the ELD SCOS grade-level clusters ([K](#), [1](#), [2-3](#), [4-5](#), [6-8](#), [9-12](#)) in the left column with the connected Science standards in the right columns. Shading is used throughout the document to assist viewers in identifying mapping for each language expectation. This document does not include an exhaustive list of the possible connections. Educators should use their knowledge of the ELD standards and their professional judgment when selecting ELD language expectations and Science standards for integration.

ELD-SC.K.Inform.Interpretive	Kindergarten
<b>Interpret scientific informational texts by:</b> Determining what text is about	*Note: While there are no specific science standards listed, language instruction for this language expectation can be integrated within all aspects of science instruction.
<b>Interpret scientific informational texts by:</b> Defining or classifying a concept or entity	<p><b>K.P.2</b> Understand how objects are described based on their physical properties and how they are used.</p> <p>K.P.2.1 Classify objects by observable physical properties (including size, color, shape, texture, weight and flexibility).</p> <p>K.P.2.2 Compare the observable physical properties of different kinds of materials (clay, wood, cloth, paper, etc) from which objects are made and how they are used.</p> <p><b>K.L.1</b> Compare characteristics of animals that make them alike and different from other animals and nonliving things.</p> <p>K.L.1.1 Compare different types of the same animal (i.e. different types of dogs, different types of cats, etc.) to determine individual differences within a particular type of animal.</p> <p>K.L.1.2 Compare characteristics of living and nonliving things in terms of their:</p> <ul style="list-style-type: none"> <li>• Structure</li> <li>• Growth</li> <li>• Changes</li> <li>• Movement</li> <li>• Basic needs</li> </ul>

**ELD Standard 4: Language for Science**  
**Grade 1**

ELD-SC.1.Inform.Interpretive	Grade 1
<p><b>Interpret scientific informational texts by:</b> Determining what text is about</p>	<p><b>1.E.2</b> Understand the physical properties of Earth materials that make them useful in different ways.  1.E.2.1 Summarize the physical properties of Earth materials, including rocks, minerals, soils and water that make them useful in different ways</p> <p><b>1.L.1</b> Understand characteristics of various environments and behaviors of humans that enable plants and animals to survive.  1.L.1.3 Summarize ways that humans protect their environment and/or improve conditions for the growth of the plants and animals that live there (e.g., reuse or recycle products to avoid littering).</p> <p><b>1.L.2</b> Summarize the needs of living organisms for energy and growth.  1.L.2.1 Summarize the basic needs of a variety of different plants (including air, water, nutrients, and light) for energy and growth. 1.L.2.2 Summarize the basic needs of a variety of different animals (including air, water, and food) for energy and growth.</p>
<p><b>Interpret scientific informational texts by:</b> Defining or classifying concept or entity</p>	<p><b>1.E.1</b> Recognize the features and patterns of the earth/moon/sun system as observed from Earth.  1.E.1.1 Recognize differences in the features of the day and night sky and apparent movement of objects across the sky as observed from Earth.  1.E.1.2 Recognize patterns of observable changes in the Moon's appearance from day to day.</p> <p><b>1.E.2</b> Understand the physical properties of Earth materials that make them useful in different ways.  1.E.2.2 Compare the properties of soil samples from different places relating their capacity to retain water, nourish and support the growth of certain plants.</p>

	<p><b>1.L.1</b> Understand characteristics of various environments and behaviors of humans that enable plants and animals to survive.</p> <p>1.L.1.3 Summarize ways that humans protect their environment and/or improve conditions for the growth of the plants and animals that live there (e.g., reuse or recycle products to avoid littering).</p>
<b>ELD-SC.1.Inform.Expressive</b>	<b>Grade 1</b>
<b>Construct scientific informational texts that:</b> Introduce others to a topic or entity	<p><b>1.P.1</b> Understand how forces (pushes or pulls) affect the motion of an object.</p> <p>1.P.1.1 Explain the importance of a push or pull to changing the motion of an object.</p> <p>1.P.1.2 Explain how some forces (pushes and pulls) can be used to make things move without touching them, such as magnets.</p>
<b>Construct scientific informational texts that:</b> Define, describe, and classify concept, topic, or entity	<p><b>1.P.1</b> Understand how forces (pushes or pulls) affect the motion of an object.</p> <p>1.P.1.1 Explain the importance of a push or pull to changing the motion of an object.</p> <p>1.P.1.2 Explain how some forces (pushes and pulls) can be used to make things move without touching them, such as magnets.</p>
<b>Construct scientific informational texts that:</b> Summarize observations or factual information	<p><b>1.E.2</b> Understand the physical properties of Earth materials that make them useful in different ways.</p> <p>1.E.2.1 Summarize the physical properties of Earth materials, including rocks, minerals, soils and water that make them useful in different ways.</p> <p><b>1.L.1</b> Understand characteristics of various environments and behaviors of humans that enable plants and animals to survive.</p> <p>1.L.1.3 Summarize ways that humans protect their environment and/or improve conditions for the growth of the plants and animals that live there (e.g., reuse or recycle products to avoid littering).</p> <p><b>1.L.2</b> Summarize the needs of living organisms for energy and growth</p> <p>1.L.2.1 Summarize the basic needs of a variety of different plants (including air, water, nutrients, and light) for energy and growth.</p> <p>1.L.2.2 Summarize the basic needs of a variety of different animals</p>

	(including air, water, and food) for energy and growth.
<b>ELD-SC.1.Explain.Interpretive</b>	<b>Grade 1</b>
<b>Interpret scientific explanations by:</b> Defining investigable questions or simple design problems based on observations and data about a phenomenon	<b>1.P.1</b> Understand how forces (pushes or pulls) affect the motion of an object. 1.P.1.1 Explain the importance of a push or pull to changing the motion of an object. 1.P.1.2 Explain how some forces (pushes and pulls) can be used to make things move without touching them, such as magnets. 1.P.1.3 Predict the effect of a given force on the motion of an object, including balanced forces.
<b>Interpret scientific explanations by:</b> Analyzing several events and observations to help explain how or why a phenomenon occurs	<b>1.P.1</b> Understand how forces (pushes or pulls) affect the motion of an object. 1.P.1.1 Explain the importance of a push or pull to changing the motion of an object. 1.P.1.2 Explain how some forces (pushes and pulls) can be used to make things move without touching them, such as magnets.
<b>Interpret scientific explanations by:</b> Identifying information from observations (that supports particular points in explanations)	<b>1.E.2</b> Understand the physical properties of Earth materials that make them useful in different ways. 1.E.2.2 Compare the properties of soil samples from different places relating their capacity to retain water, nourish and support the growth of certain plants.
<b>ELD-SC.1.Explain.Expressive</b>	<b>Grade 1</b>
<b>Construct scientific explanations that:</b> Describe observations and/or data about a phenomenon	<b>1.E.2</b> Understand the physical properties of Earth materials that make them useful in different ways. 1.E.2.2 Compare the properties of soil samples from different places relating their capacity to retain water, nourish and support the growth of certain plants.  <b>1.L.1</b> Understand characteristics of various environments and behaviors of humans that enable plants and animals to survive. 1.L.1.2 Give examples of how the needs of different plants and animals can be met by their environments in North Carolina or different places

	throughout the world.
<b>Construct scientific explanations that:</b> Relate how a series of events causes something to happen	<b>1.P.1</b> Understand how forces (pushes or pulls) affect the motion of an object 1.P.1.1 Explain the importance of a push or pull to changing the motion of an object. 1.P.1.2 Explain how some forces (pushes and pulls) can be used to make things move without touching them, such as magnets.
<b>Construct scientific explanations that:</b> Compare multiple solutions to a problem	<b>1.E.2</b> Understand the physical properties of Earth materials that make them useful in different ways. 1.E.2.2 Compare the properties of soil samples from different places relating their capacity to retain water, nourish and support the growth of certain plants.

**ELD Standard 4: Language for Science  
Grades 2-3**

ELD-SC.2-3.Explain.Interpretive	Grade 2	Grade 3
<p><b>Interpret scientific explanations by:</b> Defining investigable questions or simple design problems based on observations, data, and prior knowledge about a phenomenon</p>	<p>*Note: While there are no specific science standards listed, language instruction for this language expectation can be integrated within all aspects of science instruction.</p>	<p><b>3.L.2</b> Understand how plants survive in their environments. 3.L.2.4 Explain how the basic properties (texture and capacity to hold water) and components (sand, clay and humus) of soil determine the ability of soil to support the growth and survival of many plants.</p>
<p><b>Interpret scientific explanations by:</b> Obtaining and combining information from observations, and using evidence to help explain how or why a phenomenon occurs</p>	<p><b>2.P.1</b> Understand the relationship between sound and vibrating objects. 2.P.1.1 Illustrate how sound is produced by vibrating objects and columns of air. 2.P.1.2 Summarize the relationship between sound and objects of the body that vibrate – eardrum and vocal cords.</p> <p><b>2.P.2</b> Understand properties of solids and liquids and the changes they undergo. 2.P.2.1 Give examples of matter that change from a solid to a liquid and from a liquid to a solid by heating and cooling. 2.P.2.2 Compare the amount (volume and weight) of water in a container before and after freezing. 2.P.2.3 Compare what happens to water left in an open container over time as to water left in a closed container.</p> <p><b>2.E.1</b> Understand patterns of weather and factors that affect weather.</p>	<p><b>3.P.1</b> Understand motion and factors that affect motion. 3.P.1.2 Compare the relative speeds (faster or slower) of objects that travel the same distance in different amounts of time. 3.P.1.3 Explain the effects of earth’s gravity on the motion of any object on or near the earth.</p> <p><b>3.P.2</b> Understand the structure and properties of matter before and after they undergo a change. 3.P.2.3 Summarize changes that occur to the observable properties of materials when different degrees of heat are applied to them, such as melting ice or ice cream, boiling water or an egg, or freezing water.</p> <p><b>3.L.1</b> Understand human body systems and how they are essential for life: protection, movement and support. 3.L.1.2 Explain why skin is necessary for protection and for the body to remain</p>

	<p>2.E.1.3 Compare weather patterns that occur over time and relate observable patterns to time of day and time of year.</p>	<p>healthy.</p> <p><b>3.L.2</b> Understand how plants survive in their environments.</p> <p>3.L.2.2 Explain how environmental conditions determine how well plants survive and grow.</p> <p>3.L.2.4 Explain how the basic properties (texture and capacity to hold water) and components (sand, clay and humus) of soil determine the ability of soil to support the growth and survival of many plants.</p>
<p><b>Interpret scientific explanations by:</b> Identifying information from observations as well as evidence that supports particular points in explanations</p>	<p><b>2.P.1</b> Understand the relationship between sound and vibrating objects.</p> <p>2.P.1.1 Illustrate how sound is produced by vibrating objects and columns of air.</p> <p><b>2.P.2</b> Understand properties of solids and liquids and the changes they undergo.</p> <p>2.P.2.1 Give examples of matter that change from a solid to a liquid and from a liquid to a solid by heating and cooling.</p> <p>2.P.2.2 Compare the amount (volume and weight) of water in a container before and after freezing.</p> <p>2.P.2.3 Compare what happens to water left in an open container over time as to water left in a closed container.</p> <p><b>2.E.1</b> Understand patterns of weather and factors that affect weather.</p> <p>2.E.1.3 Compare weather patterns that occur over time and relate observable patterns to time of day and time of year.</p>	<p><b>3.P.1</b> Understand motion and factors that affect motion.</p> <p>3.P.1.3 Explain the effects of earth's gravity on the motion of any object on or near the earth.</p> <p><b>3.P.2</b> Understand the structure and properties of matter before and after they undergo a change.</p> <p>3.P.2.3 Summarize changes that occur to the observable properties of materials when different degrees of heat are applied to them, such as melting ice or ice cream, boiling water or an egg, or freezing water.</p> <p><b>3.L.1</b> Understand human body systems and how they are essential for life: protection, movement and support.</p> <p>3.L.1.2 Explain why skin is necessary for protection and for the body to remain healthy.</p> <p><b>3.L.2</b> Understand how plants survive in their</p>

		<p>environments.</p> <p>3.L.2.2 Explain how environmental conditions determine how well plants survive and grow.</p> <p>3.L.2.4 Explain how the basic properties (texture and capacity to hold water) and components (sand, clay and humus) of soil determine the ability of soil to support the growth and survival of many plants.</p>

<b>Interpret scientific arguments by:</b> Identifying appropriate and sufficient evidence from data, models, and/ or information from investigations of a phenomenon or design solutions	<b>Bio.1.1</b> Understand the relationship between the structures and functions of cells and their organelles. Bio.1.1.1 Summarize the structure and function of organelles in eukaryotic cells (including the nucleus, plasma membrane, cell wall, mitochondria, vacuoles, chloroplasts, and ribosomes) and ways that these organelles interact with each other to perform the function of the cell. Bio.1.1.2 Compare prokaryotic and eukaryotic cells in terms of their general structures (plasma membrane and genetic material) and degree of complexity. Bio.1.1.3 Explain how instructions in DNA lead to cell differentiation and result in cells specialized to perform specific functions in multicellular organisms..	<b>Chm.1.1</b> Analyze the structure of atoms and ions. Chm.1.1.3 Explain the emission of electromagnetic radiation in spectral form in terms of the Bohr model. Chm.1.1.4 Explain the process of radioactive decay by the use of nuclear equations and half-life.  <b>Chm.1.2</b> Understand the bonding that occurs in simple compounds in terms of bond type, strength, and properties. Chm.1.2.1 Compare (qualitatively) the relative strengths of ionic, covalent, and metallic bonds. Chm.1.2.2 Infer the type of bond and chemical formula formed between atoms. Chm.1.2.3 Compare inter- and intra-particle forces. Chm.1.2.5 Compare the properties of ionic, covalent,	<b>EEn.1.1</b> Explain the Earth's role as a body in space. EEn.1.1.1 Explain the Earth's motion through space, including precession, nutation, the barycenter, and its path about the galaxy. EEn.1.1.2 Explain how the Earth's rotation and revolution about the Sun affect its shape and is related to seasons and tides. EEn.1.1.3 Explain how the sun produces energy which is transferred to the Earth by radiation. EEn.1.1.4 Explain how incoming solar energy makes life possible on Earth.  <b>EEn.2.1</b> Explain how processes and forces affect the lithosphere. EEn.2.1.1 Explain how the rock cycle, plate tectonics, volcanoes, and earthquakes

	<p><b>Bio.1.2</b> Analyze the cell as a living system.</p> <p>Bio.1.2.1 Explain how homeostasis is maintained in the cell and within an organism in various environments (including temperature and pH).</p> <p>Bio.1.2.2 Analyze how cells grow and reproduce in terms of interphase, mitosis and cytokinesis.</p> <p>Bio.1.2.3 Explain how specific cell adaptations help cells survive in particular environments (focus on unicellular organisms).</p> <p><b>Bio.2.1</b> Analyze the interdependence of living organisms within their environments.</p> <p>Bio.2.1.1 Analyze the flow of energy and cycling of matter (water, carbon, nitrogen and oxygen) through ecosystems relating the significance of each to maintaining the health and sustainability of an ecosystem.</p> <p>Bio.2.1.2 Analyze the survival and reproductive success of organisms in terms of behavioral, structural, and reproductive adaptations.</p> <p>Bio.2.1.3 Explain various ways organisms interact with each</p>	<p>metallic, and network compound.</p> <p><b>Chm.1.3</b> Understand the physical and chemical properties of atoms based on their position in the Periodic Table.</p> <p>Chm.1.3.2 Infer the physical properties (atomic radius, metallic and nonmetallic characteristics) of an element based on its position on the Periodic Table.</p> <p>Chm.1.3.3 Infer the atomic size, reactivity, electronegativity, and ionization energy of an element from its position in the Periodic Table.</p> <p><b>Chm.2.1</b> Understand the relationship among pressure, temperature, volume, and phase.</p> <p>Chm.2.1.1 Explain the energetic nature of phase changes.</p> <p>Chm.2.1.2 Explain heating and cooling curves (heat of fusion, heat of vaporization, heat, melting point, and boiling point).</p> <p>Chm.2.1.4 Infer simple calorimetric calculations based on the concepts of heat lost equals heat gained and specific heat.</p> <p>Chm.2.1.5 Explain the</p>	<p>impact the lithosphere.</p> <p>EEn.2.1.2 Predict the locations of volcanoes, earthquakes, and faults based on information contained in a variety of maps.</p> <p>EEn.2.1.3 Explain how natural actions such as weathering, erosion (wind, water and gravity), and soil formation affect Earth's surface.</p> <p>EEn.2.1.4 Explain the probability of and preparation for geohazards such as landslides, avalanches, earthquakes and volcanoes in a particular area based on available data.</p> <p><b>EEn.2.2</b> Understand how human influences impact the Lithosphere.</p> <p>EEn.2.2.1 Explain the consequences of human activities on the lithosphere (such as mining, deforestation, agriculture, overgrazing, urbanization, and land use) past and present.</p> <p>EEn.2.2.2 Compare the various methods humans use to acquire traditional energy sources (such as peat, coal, oil, natural gas, nuclear fission, and wood).</p> <p><b>EEn.2.3</b> Explain the structure and</p>
--	--	--	--

	<p>other (including predation, competition, parasitism, mutualism) and with their environments resulting in stability within ecosystems.</p> <p><b>Bio.2.1.4</b> Explain why ecosystems can be relatively stable over hundreds or thousands of years, even though populations may fluctuate (emphasizing availability of food, availability of shelter, number of predators and disease).</p> <p><b>Bio.2.2</b> Understand the impact of human activities on the environment (one generation affects the next).</p> <p><b>Bio.2.2.1</b> Infer how human activities (including population growth, pollution, global warming, burning of fossil fuels, habitat destruction and introduction of nonnative species) may impact the environment.</p> <p><b>Bio.2.2.2</b> Explain how the use, protection and conservation of natural resources by humans impact the environment from one generation to the next.</p> <p><b>Bio.3.1</b> Explain how traits are determined by the structure and function of DNA.</p> <p><b>Bio.3.1.1</b> Explain the double-</p>	<p>relationships between pressure, temperature, volume, and quantity of gas both qualitative and quantitative.</p> <p><b>Chm.2.2</b> Analyze chemical reactions in terms of quantities, product formation, and energy.</p> <p><b>Chm.2.2.1</b> Explain the energy content of a chemical reaction.</p> <p><b>Chm.2.2.2</b> Analyze the evidence of chemical change.</p> <p><b>Chm.2.2.3</b> Analyze the law of conservation of matter and how it applies to various types of chemical equations (synthesis, decomposition, single replacement, double replacement, and combustion).</p> <p><b>Chm.2.2.4</b> Analyze the stoichiometric relationships inherent in a chemical reaction.</p> <p><b>Chm.2.2.5</b> Analyze quantitatively the composition of a substance (empirical formula, molecular formula, percent composition, and hydrates).</p> <p><b>Chm.3.1</b> Understand the factors affecting rate of reaction and chemical equilibrium.</p> <p><b>Chm.3.1.1</b> Explain the factors that affect the rate of a reaction (temperature, concentration,</p>	<p>processes within the hydrosphere.</p> <p><b>EEn.2.3.1</b> Explain how water is an energy agent (currents and heat transfer).</p> <p><b>EEn.2.3.2</b> Explain how groundwater and surface water interact.</p> <p><b>EEn.2.4</b> Evaluate how humans use water.</p> <p><b>EEn.2.4.1</b> Evaluate human influences on freshwater availability.</p> <p><b>EEn.2.4.2</b> Evaluate human influences on water quality in North Carolina's river basins, wetlands and tidal environments.</p> <p><b>EEn.2.5</b> Understand the structure of and processes within our atmosphere.</p> <p><b>EEn.2.5.2</b> Explain the formation of typical air masses and the weather systems that result from air mass interactions.</p> <p><b>EEn.2.5.3</b> Explain how cyclonic storms form based on the interaction of air masses.</p> <p><b>EEn.2.5.4</b> Predict the weather using available weather maps and data (including surface, upper atmospheric winds, and satellite imagery).</p> <p><b>EEn.2.5.5</b> Explain how human activities affect air quality.</p>
--	---	---	--

	<p>stranded, complementary nature of DNA as related to its function in the cell.            Bio.3.1.2 Explain how DNA and RNA code for proteins and determine traits.            Bio.3.1.3 Explain how mutations in DNA that result from interactions with the environment (i.e. radiation and chemicals) or new combinations in existing genes lead to changes in function and phenotype.</p> <p><b>Bio.3.2</b> Understand how the environment, and/or the interaction of alleles, influences the expression of genetic traits.            Bio.3.2.1 Explain the role of meiosis in sexual reproduction and genetic variation.            Bio.3.2.2 Predict offspring ratios based on a variety of inheritance patterns (including dominance, co-dominance, incomplete dominance, multiple alleles, and sex-linked traits).            Bio.3.2.3 Explain how the environment can influence the expression of genetic traits.</p> <p><b>Bio.3.3</b> Understand the application of DNA technology.            Bio.3.3.1 Interpret how DNA is</p>	<p>particle size and presence of a catalyst).            Chm.3.1.2 Explain the conditions of a system at equilibrium.            Chm.3.1.3 Infer the shift in equilibrium when a stress is applied to a chemical system (Le Chatelier's Principle).</p> <p><b>Chm.3.2</b> Understand solutions and the solution process.            Chm.3.2.5 Interpret solubility diagrams.            Chm.3.2.6 Explain the solution process.</p>	<p><b>EEn.2.6</b> Analyze patterns of global climate change over time.            EEn.2.6.2 Explain changes in global climate due to natural processes.            EEn.2.6.3 Analyze the impacts that human activities have on global climate change (such as burning hydrocarbons, greenhouse effect, and deforestation).            EEn.2.6.4 Attribute changes in Earth systems to global climate change (temperature change, changes in pH of ocean, sea level changes, etc.).</p> <p><b>EEn.2.7</b> Explain how the lithosphere, hydrosphere, and Atmosphere individually and collectively affect the biosphere.            EEn.2.7.1 Explain how abiotic and biotic factors interact to create the various biomes in North Carolina.            EEn.2.7.2 Explain why biodiversity is important to the biosphere.            EEn.2.7.3 Explain how human activities impact the biosphere.</p> <p><b>EEn.2.8</b> Evaluate human behaviors in terms of how likely they are to ensure the ability to live sustainably on Earth.</p>

PSc.3.1.1 Explain thermal energy and its transfer. PSc.3.1.2 Explain the law of conservation of energy in a mechanical system in terms of kinetic energy, potential energy and heat. PSc.3.1.3 Explain work in terms of the relationship among the applied force to an object, the resulting displacement of the object and the energy transferred to an object.</p>	<p>Phy.2.1.3 Explain the relationship among work, power and energy.</p> <p><b>Phy.2.2</b> Analyze the behavior of waves. Phy.2.2.1 Analyze how energy is transmitted through waves, using the fundamental characteristics of waves: wavelength, period, frequency, amplitude, and wave velocity. Phy.2.2.2 Analyze wave behaviors in terms of transmission, reflection, refraction and interference. Phy.2.2.3 Compare mechanical and electromagnetic waves in terms of wave characteristics and behavior (specifically sound and light).</p> <p><b>Phy.2.3</b> Analyze the nature of moving charges and electric circuits. Phy.2.3.1 Explain Ohm's law in relation to electric circuits. Phy.2.3.3 Compare the general characteristics of AC and DC systems without calculations. Phy.2.3.4 Analyze electric systems in terms of their energy and power. Phy.2.3.5 Analyze systems with multiple potential differences and resistors connected in</p>
