CANVAS & PowerTeacher Pro

What are the plans in North Carolina for Canvas, Powerschool, and PowerTeacher Pro?

NCDPI is excited to announce that Canvas has implemented a new solution for provisioning/rostering with their SIS Integration Platform. This new solution, specifically leveraging **SIF 2.0 technology**, provisions your PowerSchool data into Canvas with bulk uploads and/or near real time events.

Canvas' engineering team is also currently testing and finalizing development on their **new PowerTeacher Pro plugin for grade passback functionality**. In order to leverage PowerTeacher Pro in Canvas, schools/districts must be on v.10+ of PowerSchool and be using Canvas' new SIF 2.0 technology provisioning solution in their SIS Integration Platform.

WHEN CAN WE BEGIN THE TRANSITION?

Canvas and DPI are currently testing provisioning and grade passback processes in a QA environment for North Carolina. Once testing has concluded, Canvas and DPI will begin rolling out the new PS and PTP solutions for each individual school/district.

WHAT IS THE PROCESS?

Once DPI's testing has concluded, Canvas will be given the go ahead to set up the individual schools/districts who have opted in to the PowerTeacher Pro rollout plan for the 2017-2018 school year.

Canvas' rollout team will work with schools/districts to finalize configurations and launch the new PS and PTP process for Canvas before the new school year.

WHO DO I CONTACT IF I HAVE QUESTIONS OR CONCERNS?
